

Backend Engineer (Python) (m/f)

Role Overview: We are looking for a highly motivated Backend Engineer to join our team in Split, Croatia. The role will focus on developing and maintaining backend systems using Python, with potential involvement in other languages such as Go or Scala. You will work closely with cross-functional teams to deliver high-quality backend solutions that strengthen our platforms and user experiences. Your responsibilities: - Develop and maintain backend services using Python - Collaborate with frontend and infrastructure teams to deliver robust software solutions - Participate in code reviews, testing, and optimizing performance - Explore and adopt new technologies to improve backend services
