Global Quality Manager (m/ž)

Global Quality Manager is responsible for developing and maintaining global quality standards, leading audits, resolving quality issues, and driving process improvements across multiple sites, requiring strong expertise in ISO standards, Six Sigma, and project management within a global, multicultural environment. How you'll make an impact... - Develop, implement, and maintain global quality standards, policies, and procedures across all regions that comply with the internal and external (ISO 9001 and customer) standards - Lead global quality audits (internal/ customer) and ensure consistency across sites - Identify and resolve quality-related issues globally, collaborate with cross-functional teams to drive process improvements - Manage quality issues (claims) across different sites - Monitor and analyze quality data to identify trends, root causes, and opportunities for improvement - Lead and support quality improvement projects across different sites - Act as a main contact person for quality system-related topics (e.g.: SAP super user) - Support product and process transfers and related releases
